

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually an apparatus made out of top quality materials intended to endure the most challenging operations and work environments. This particular piece of equipment can enable drivers to control the blades hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the entire load or the arms so as to facilitate much more exact lifting and placement in a quicker and much more effective manner.

The only one of its kind fork pocket design enables the individual operating it to be able to securely swing the unit's blades without any fear of destroying the positioning cylinders. This could allow the operator the choice to either perform simultaneous or independent fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be transformed into fork positioners on existing units.
